

```
1  /* ===== React Deploy on github =====
2
3  link-youtube: https://www.youtube.com/watch?v=F8s4Ng-re0E
4
5  1) First create react app by => npx create-react-app Name
6  2) go that folder and run on your browser => npm start
7  3) now create New Repository
8  4) now your app folder on laptop: => npm install gh-pages --save-dev
9  5) then go to package.json and see that
10
11  "devDependencies": {
12    "gh-pages": "^3.2.3"
13  }
14
15  6) now add top
16    "homepage": "http://userNameYourGitHub.gitgub.io/RepositoryName",
17    "homepage": "http://mehedi-66.github.io/Course_app_by_React",
18
19  7) in the script in package.json file
20    add
21    "predeploy": "npm run build",
22    "deploy": "gh-pages -d build",
23
24  8) => git init
25  9) git remote add origin https://github.com/mehedi-66/Course_app_by_React.git
26  10) => git status
27  11) git commit -m "First Deploy of React"
28  12) npm run deploy
29  13) now push on gitHub => git push -u origin master
30
31
32  */
```
