

```
1  /* ===== File Status Lifecycle =====
2
3  1) general folder
4  2) create (.git) => git init
5  3) add all file for tracking => git add --a
6  4) all file now stand on Staged area => git status
7  5) modified - change on file Again add to => git add --a
8  6) all file now stand on Staged area => git status
9  7) now we can commit => git commit -m "First_commit"
10
11 **** if we commit then again we need to add stagin are
12 ** That means After commit we are began .. if we chage file => add stagin area => commit
13 ***** Start => add to stagin => commint => Again begin
14 ***** Store => check pices => track (repeat)
15
16
17
18 */
```
