

```

1 // ===== Overview Of React load =====
2 /*
3     1) inside the src folder
4         index.js file load first
5
6         //***** code index.js ***** */
7
8     import React from 'react';
9     import ReactDOM from 'react-dom';
10    import App from './App';
11
12    ReactDOM.render(<App /> ,document.getElementById('root'));
13
14    /* ***** END ***** /
15
16    /** Note: first index.js file take the import file and call
17     * "react and react-dom" are dependencies library look at => package.json
18     * the render() Method base on ReactDOM with two parameter ( App_component, put_to_html_id_root)
19     * // the only html file inside the public folder....
20     */
21
22    /*
23     2) inside App.js
24         * return Html component
25     */
26
27     // ***** App.js code *****
28
29     import './App.css';
30
31     function App() {
32     return (
33         <div >
34         <h2 className="bg" >Welcome Mehedi into React World</h2>
35         </div>
36     );
37     }
38
39     export default App;
40
41     // Note: css load from App.css then the App() function
42     // send the component into index.js where it called.
43     //***** END *****
44     /*
45     3) App.css load
46
47     .bg{
48         background-color: goldenrod;
49     }
50
51     the h2 heading background will change...
52     */
53
54     /*

```

```
55 4) html file
56 .....
57 <body>
58
59 <div id="root"></div>
60
61 </body>
62 */
```
