

```
1  /* ===== Move & rename & untracked =====
2      **** if you want to remove file then
3      => git rm test3.txt // it remove file and add stagina area auto
4      => git commit -m "delete file for some reason"
5
6      **** if you and rename
7      => git mv test1.txt test2_rename.txt // (test1) to (test2) make
8
9      ***** Most important things *****
10     1) (.gitignore) only work with the untracked file
11     2) but file is now tracking stage that time
12     3) remove from the tracking
13
14     // untracking
15
16     => git rm --cached file_name.txt
17
18     it will only untracked file not deleted
19
20     4) add file to (.gitignore) then it will not add out stagin area
21
22
23
24  */
```
