```
/* =============== git diff Difference ================

   => git status

         **** stagin area VS working diroctory *******

   *** if you set some file on stagin area
   *** that means those stagin area file are ready to commit
   *** that time you change file on working diretory then
   *** you want to see what type of change you are gona make

   => git diff   // show stagin are file to working directory

   ---> After that
   > you can marge stagin are file to workig file
   > other wise commit the those First version file
   > Second Version file working directory file add After word

   ********* if you want to show the previous commit and now stagin are file Difference ******

   => git diff --staged

*/
