```
/* =============== Git ignor file ================

   => git status
   // if you want to ignor file or folder use this command
       1) first create (.gitignor) file  => touch .gitignor
       3) create one file like error log this file we want ignor => touch error.log
       2) add which file you want to ignor => (inside .gitignor <- {( error.log, file1, file2)} )

   => git add .  (git add --a) //insert file into stagin area
   => git commit -m "ignor file"

   ***** if you want ignor all (same extension file) ******
   1) inside the (.gitignor) file put

   > *.log
   > *.html
   > *.text

   this way you can follow

   ***** if you want to ignor A Folder ****
   1) inside the (.gitignor) write folder name (dir/)

   > *.log
   > dir/
   > mehedi/
   > /dir/  // outside foder ignor but inside follow
   > static/dir

   it will not follow the folder

*/
