```
/* =============== Unstagin Unmodifying File ================

  ******* Staging Area *****
  => git init
  => git status
  => git add .
  => git commit -m "first_commit"

  // modify some file

  => git add test1.txt // add file on staging area

  **** unstage file form staging Area

  => git restore --staged File_name

  ******** Fore some reason you want to go previous commit ********

    => git checkout -- fileName.txt

    // you Add the file on staging area then "checkout" goes on straging Area file

    // if you want to All modified file goes to previes commit

    => git checkout -f

*/
```
