```
/* =============== Resolving Merge Confilicts ================
    *** when create sub_branch then master branch or other sub_branch
      to let's say one index file same (title) line change to main branch and
      sub_branch that time git confuse which line add in Merge time
    *** <<<<< main branch line change \
      ===========            which line we want to add for Merge time
      >>>>> sub_branch line change /

    => git branch      // it will show branches
    => git branch -v   // it will show branches and last Commit

    *** to see merge Branch
    => git branch --merged      // it will show merged branches with the current Branch
    => git branch --no-merged    // it will show no merged branches with the current branch

    ********* Branch Delete ********
    => git branch -d branchName     // it will show ERROR coz it not marge Sub_brach
                        // if you want to Actuly delete the file then (-D)
                          // => git branch -D branchName
    ********** Merge conflite Resolve ******
    => git merge sub_branch      // current branch to sub_branch ADD
    1) use VS code will provide suggestion
    2) or type and the line of code
       => git add .
       => git commit -m "issue solve "

    => git log      // to see all commit

    */
```
